

Research & Innovation Office (RIO) is established to drive, facilitate and promote the university's research and development. These includes managing both research and consultancy projects in terms of their submissions, progress performance, financial allocation and utilization and human resources management.

The office is also expected to fulfill requirements made by university researchers, attend to and appropriately channel requests made by external clients, and continue meeting the future needs of the university R&D including the intellectual property requisition management and commercial exploitation of technology.
